Methods Summary

The purpose of the 2018-2019 U.S.D.A. Forest Service Region 1 Social Surveys was to examine:

- perceptions of the purpose for federal public lands;
- views about possible management actions on those lands;
- opinions about possible concerns regarding federal public lands;
- frequency of self-reported activities on federal public lands; and
- opinions about the quantity of services provided on federal public lands.

The 2018-2019 surveys were designed to help policy-makers and planners quantify public opinions about federal public lands that are close to the home of Region 1 residents.

The mail and internet-administered surveys provide U.S.D.A. Forest Service rigorous, representative samples by which to gauge current public opinion. The surveys were constructed to act as a benchmark that would allow possible future exploration of trends in public sentiment regarding federal public lands in U.S.D.A. Forest Service Region 1.

Survey Administration

University of Montana's Bureau of Business and Economic Research (BBER) administered the surveys on behalf of the U.S.D.A. Forest Service in two waves:

1. Wave 1 was administered from January 7, 2018, through April 11, 2018.
2. Wave 2 was administered from January 18, 2019 through April 22, 2019.

The surveys were administered by mail and responses were collected over the internet or via a hardcopy questionnaire. Sampled potential respondents received up to 4 mail contacts during the survey:

1. An introductory letter inviting participation via an internet link provided;
2. A follow-up letter thanking respondents and reminding nonrespondents that they could participate via the internet link provided;
3. A 8.5" x 11' questionnaire packet mailed to non-respondents only inviting participation via an internet link provided or by completing a hardcopy questionnaire and returning it in the stamped envelope provided;
4. A second 8.5" x 11' questionnaire packet mailed to non-respondents only inviting participation via an internet link provided or by completing a hardcopy questionnaire and returning it in the stamped envelope provided.

Questionnaire Design

The questionnaire was designed by U.S.D.A. Forest Service Region 1 staff. U.S. Office of Management and Budget clearance for the survey was issued on 11/20/2017. The OMB control number for this survey is 0596-0236. BBER formatted the hardcopy of the questionnaire. In

addition, BBER programmed and tested the internet version of the questionnaire using software provided by Qualtrics, Inc.

Sampling

Sampling was conducted during each wave using an addressed-based, random sample purchased from Dynata. Within household random sampling was conducted using the most recent birthday method. The study population was adults (ages 18+) who lived in an occupied dwelling that was listed on the U.S. Postal Service’s Computerized Delivery Sequence File. These adults were sampled from a total of 564 census tracts located in or near national forests in Region 1. The list of relevant census tracts was provided by Region 1 staff. This population differs slightly from all adults as it excludes institutionalized persons, homeless persons, and those absent during the survey period.

The samples were stratified by the U.S. Office of Management and Budget (OMB) definition of urban areas. One stratum consisted of all Region 1 census tracts outside OMB-designated metropolitan or micropolitan statistical area counties. The second stratum consisted of all Region 1 census tracts within metropolitan or micropolitan statistical area counties. The purpose of stratifying the samples in this way was to make sure that respondents in low population areas were not underrepresented, as they may have been using a simple random sample. The sampling plan is summarized in Table 1 below:

Table 1: Sampling Plan Description

SAMPLING STRATUM	2017 AMERICAN COMMUNITY SURVEY 5 YEAR POPULATION	SAMPLED ADULTS	RESPONDENTS (N)
Outside OMB-designated metropolitan or micropolitan statistical area counties	446,912	5,020	1,477
Within metropolitan or micropolitan statistical area counties	1,407,186	2,520	752
TOTAL	1,854,098	7,540	2,229

Sampling Error

Data users should take care to calculate standard errors and t-tests for these data using a statistical software package that can account for the actual design of the combined surveys. Accounting for the stratified design and weighted data, the confidence interval for a proportion of 50% estimated from the combined wave 1 and wave 2 data is +/- 4.1% and the standard error is 2.1%

The Respondents

Table 2 below describes the combined survey respondents. 2017 U.S. Census Bureau American Community Survey 5-year population proportions for the ages 18 and older study population of 1,854,098 persons are provided for context.

Table 2: Respondent Demographics

CHARACTERISTIC		2017 ACS 5- YEAR ESTIMATE (%)	UNWEIGHTED RESPONSES (%)	WEIGHTED RESPONSES (%)
Gender	Male	50.0%	57.8%	50.0%
	Female	49.7%	41.9%	49.7%
	Other	0.3%	0.3%	0.3%
Age	18-34	30.4%	7.9%	30.4%
	35-49	14.9%	9.6%	14.9%
	50-64	33.8%	38.3%	33.8%
	65 +	21.1%	44.2%	21.1%
Race	White	91.2%	95.7%	91.2%
	American Indian	3.2%	3.6%	3.2%
	Other	5.6%	0.7%	5.6%
2017 Household Income	< \$50,000	47.6%	44.7%	47.6%
	\$50,000 - \$99,999	31.6%	38.3%	31.6%
	\$100,000 +	20.8%	17.0%	20.8%
Education Attainment	HS diploma or less	36.1%	18.9%	36.1%
	Some college or AA degree	37.5%	49.1%	37.5%
	Bachelors +	26.4%	32.0%	26.4%

Data Set Preparation

Following collection and data entry, 100% of mailed questionnaires were verified for data entry accuracy. Appropriate data labels were added as well as composite variables and flags to facilitate analysis. Missing values for the weighting variables, necessary for comparison to the 2016 ACS 5-year estimates, were imputed using the hot deck method which substitutes the responses of similar cases for missing data. Data were processed using three statistical software packages: IBM SPSS Statistics Version 25 (2017), SAS Version 9.4 (2016), and Statistics Canada's G-EST Version 2.01 (2017).

Weighting

Weights for the 2018-2019 U.S.D.A. Forest Service Region 1 Social Surveys were calculated using a three-step process. In step 1 a base weight was calculated to account for the probability of selection of each individual in the sample. The population control total was based on the U.S. Census Bureau's American Community Survey 2017 5-year estimate for the population of persons age 18 and older. In step 2 the base weight was modified to adjust for nonresponse. In step 3 the nonresponse-adjusted weight was calibrated to population control totals derived from the U.S. Census Bureau's American Community Survey 2017 5-year estimates for the population of persons age 18 and older.

Survey weight calibration was conducted using the Gest_Calibration module of Generalized Estimation System version 2.01 (March 2017) developed by Statistics Canada. The 2018-2019 U.S.D.A. Forest Service Region 1 Social Survey weights were calibrated to population control totals by:

1. Gender
2. Age
3. Race
4. 2017 household income
5. Educational attainment
6. Sampling strata population

Two survey weights were provided by BBER on the dataset: a population weight useful for estimating the number of adults in the study population who have a particular characteristic, and a sample weight needed for most statistical packages to calculate standard errors.

Structure of the Remainder of this Report

The remainder of this report is divided into two sections. The first section presents extensive crosstabulations of the responses to these surveys. The second section displays answers to the open-ended questions asked in these surveys.

Crosstabulations

Q2. How important do you believe each of the following is as a purpose of your local, federal public lands?
a. Protecting water quality

		Not at all important	Slightly important	Moderately important	Very important	Extremely important	Total Unweighted Count
		Row N %	Row N %	Row N %	Row N %	Row N %	
Gender_wt	Total	1.0%	2.7%	6.6%	29.5%	60.2%	2187
	Male	1.5%	4.2%	7.5%	35.2%	51.6%	1267
	Female	0.5%	1.3%	5.7%	23.5%	69.1%	913
	Other	0.0%	0.0%	6.5%	74.8%	18.7%	7
Age_wt	18-34	0.8%	3.3%	6.4%	28.4%	61.2%	171
	35-44	3.0%	1.2%	10.6%	18.1%	67.1%	212
	45-64	0.1%	3.8%	5.2%	35.0%	56.0%	844
	65 and over	1.2%	1.4%	6.3%	30.5%	60.6%	960
