

2008 University of Montana Student Southern Route Pilot Survey

Purpose

- Conduct a pilot test of a possible general population survey that examines factors which influence passenger train travel on the proposed southern route.
- Focus on the UM student population because of easy access to the population and low cost of the pilot test.

Methods

- How?
 - World-wide web
 - List-based random sample
- Whom?
 - Age 18 +
 - UM Students
- When?
 - 4/24/08 through 4/30/08
- How Many?
 - 469 completed questionnaires
- Sampling Error Rate?
 - 5% (+/-)
- Response Rate?
 - 23.5%
 - AAPOR RR1 (2006)

Self-reported likelihood of UM student passenger train travel from Missoula to Billings

Self-reported likelihood of UM students paying \$200 to ride a passenger train from Missoula to Billings round-trip

Maximum amount UM students are willing to pay to ride a passenger train from Missoula to Billings round-trip

Self-reported likelihood of UM student passenger train travel from Missoula to Billings by trip duration

Self-reported likelihood of UM student passenger train travel from Missoula to Billings by trip availability

UM Student Survey Southern Route Catchment Area

Self-reported likelihood of UM student passenger train travel from Missoula to Billings by visited the southern route catchment area since September 2007

Self-reported likelihood of UM student passenger train travel from Missoula to Billings by parent(s) live in the southern route catchment area

Self-reported likelihood of UM student passenger train travel from Missoula to Billings by age

OLS Regression Model: Factors That Influence UM Students' Self-Reported Likelihood of Train Travel from Missoula to Billings

$$L = -0.997 + 0.085*TC + 0.031*A + 0.626*PC + 0.29 *CC + 0.059*NT + -0.079*DT$$

Where:

L = Self-reported likelihood of UM student passenger train travel from Missoula to Billings

Very likely	2
Somewhat likely	1
Neither likely nor unlikely	0
Somewhat unlikely	-1
Very unlikely	-2

TC = Number of trips into the southern route catchment area since September 2007

A = Age

PC = Parent(s) live in southern route catchment area

CC = Availability of convenient connections to final destination

NT = Number of trips available per day or week

DT = Duration of trip

OLS Regression Model: Factors That Influence UM Students' Self-Reported Likelihood of Train Travel from Missoula to Billings

R Square		F Statistic		Significance of F	
.355		38.786		.000	
Variable	Coefficient	Standard Error	T Statistic	Significance of T	
Constant	-0.997	0.297	-3.350	0.001	
Number of trips to catchment area	0.085	0.013	6.516	0.000	
Age	0.031	0.011	2.695	0.007	
Parent(s) live in catchment area	0.626	0.142	4.400	0.000	
Availability of connections	0.299	0.071	4.207	0.000	
Number of trip available	0.059	0.016	3.786	0.000	
Duration of trip	-0.079	0.016	-4.947	0.000	

Self-reported likelihood of UM student passenger train travel from Missoula to Billings by ever travelled on a train

Self-reported likelihood of UM student passenger train travel from Missoula to Billings by financial aid status

Self-reported likelihood of UM student passenger train travel from Missoula to Billings by having a car, truck, or van
