## **Methods Summary**

The purpose of the 2019 U.S.D.A. Forest Service Region 1 Social Survey is to obtain additional observations to examine:

- perceptions of the purpose for federal public lands;
- views about possible management actions on those lands;
- opinions about possible concerns regarding federal public lands;
- frequency of self-reported activities on federal public lands; and
- opinions about the quantity of services provided on federal public lands.

The 2019 survey is an extension of the 2018 survey which was designed to help policy-makers and planners quantify public opinions about federal public lands that are close to the home of Region 1 residents.

The mail and internet-administered survey provides U.S.D.A. Forest Service a rigorous, representative sample by which to gauge current public opinion. The survey was constructed to act as a benchmark that would allow possible future exploration of trends in public sentiment regarding federal public lands in U.S.D.A. Forest Service Region 1.

## **Survey Administration**

University of Montana's Bureau of Business and Economic Research (BBER) administered the survey on behalf of the U.S.D.A. Forest Service from January 18, 2019 through April 22, 2019. The survey was administered by mail and responses were collected over the internet or via a hardcopy questionnaire. Sampled potential respondents received up to 4 mail contacts during the survey:

1. An introductory letter inviting participation via an internet link provided;
2. A follow-up letter thanking respondents and reminding nonrespondents that they could participate via the internet link provided;
3. A 8.5" x 11' questionnaire packet mailed to non-respondents only inviting participation via an internet link provided or by completing a hardcopy questionnaire and returning it in the stamped envelope provided;
4. A second 8.5" x 11' questionnaire packet mailed to non-respondents only inviting participation via an internet link provided or by completing a hardcopy questionnaire and returning it in the stamped envelope provided.

## **Questionnaire Design**

The questionnaire was designed by U.S.D.A. Forest Service Region 1 staff. U.S. Office of Management and Budget clearance for the survey was issued on 11/20/2017. The OMB control number for this survey is 0596-0236. BBER formatted the hardcopy of the questionnaire. In addition, BBER programmed and tested the internet version of the questionnaire using software provided by Qualtrics, Inc.

## Sampling

Sampling was conducted using an addressed-based, random sample purchased from SSI, Inc. Within household random sampling was conducted using the most recent birthday method. The study population was adults (ages 18+) who lived in an occupied dwelling that was listed on the U.S. Postal Service's Computerized Delivery Sequence File. These adults were sampled from 197 census tracts located in or near national forests in Region 1. The list of relevant census tracts was provided by Region 1 staff. This population differs slightly from all adults as it excludes institutionalized persons, homeless persons, and those absent during the survey period. The sampling plan is summarized in Table 1 below:

**Table 1: Sampling Plan Description**

<b>CENSUS TRACTS</b>	<b>2017 18+ POPULATION</b>	<b>SAMPLED ADDRESSES</b>	<b>UNWEIGHTED RESPONSES</b>
Outside metropolitan or micropolitan statistical area counties	451,660	3,800	1,077

## Sampling Error

The 1,077 responses to this survey yielded a confidence interval of +/- 2.9% under the assumptions of simple random sampling. This means that if the survey were administered 100 times using simple random sampling, in 95 of the administrations a proportion of 50% would be found +/- 2.9%. The standard error for this survey under the assumptions of simple random sampling is 1.5%. Data users should take care to calculate standard errors and t-tests for these data using a statistical software package that can account for the actual sample design of the survey. Accounting for the stratified sample design, the actual confidence interval for a proportion of 50% estimated from this survey is +/- 5.0% and the standard error is 2.6%

## Data Collection Outcomes

Of the 3,800 potential respondents sampled 1,077 responded. Table 2 below summarizes the outcomes of the data collection process:

**Table 2: Data Collection Outcome Summary**

DATA COLLECTION OUTCOME CATEGORY	FINAL AAPOR DISPOSITION CODE	N
<b>Interview (Category 1)</b>		
Complete	1.0/1.10	1,077
Partial	1.2000	0
<b>Eligible, non-interview (Category 2)</b>		
Refusal	2.1000	27
<b>Unknown eligibility, non-interview (Category 3)</b>		
Nothing returned	3.1900	1,904
USPS: No mail receptacle	3.2530	208
USPS: Unable to forward, not deliverable as addressed	3.3141	268
USPS: Temporarily away, holding period expired	3.3400	5
<b>Not eligible (Category 4)</b>		
USPS: No such number	4.3131	52
USPS: Vacant	4.600	259
<b>Total sample used</b>		<b>3,800</b>

Table 2 lists data collection outcomes by categories and codes established by the American Association of Public Opinion Research. (American Association for Public Opinion Research, 2016) The response rate for this survey is 36.3%, calculated using AAPOR response rate formula 3. This response rate is typical for rigorously conducted, address-sampled, mail and internet-administered surveys. (Dillman, Smyth, & Christian, 2014)

## The Respondents

Table 3 below describes the respondents. 2017 U.S. Census Bureau American Community Survey 5-year population proportions for the study population of 1,905,607 persons are provided for context.

## Data Set Preparation

Following collection and data entry, 100% of mailed questionnaires were verified for data entry accuracy. Appropriate data labels were added as well as composite variables and flags to facilitate analysis. Missing values for the weighting variables, necessary for comparison to the 2016 ACS 5-year estimates, were imputed using the hot deck method which substitutes the responses of similar cases for missing data. Data were processed using three statistical software packages: IBM SPSS Statistics Version 25 (2017), SAS Version 9.4 (2016), and Statistics Canada's G-EST Version 2.01 (2017).

## Weighting

Weights for the 2019 U.S.D.A. Forest Service Region 1 Social Survey were calculated using a three-step process. In step 1 a base weight was calculated to account for the probability of selection of each individual in the sample. The population control total was based on the U.S. Census Bureau's American Community Survey 2017 5-year estimate for the population of persons age 18 and older. In step 2 the base weight was modified to adjust for nonresponse. In step 3 the nonresponse-adjusted weight was calibrated to population control totals derived from the U.S. Census Bureau's American Community Survey 2017 5-year estimates for the population of persons age 18 and older.

Survey weight calibration was conducted using the Gest\_Calibration module of Generalized Estimation System version 2.01 (March 2017) developed by Statistics Canada. The 2019 U.S.D.A. Forest Service Region 1 Social Survey weight was calibrated to population control totals by:

1. Gender
2. Age
3. Race
4. 2017 household income
5. Educational attainment

Two survey weights were provided by BBER on the dataset: a population weight useful for estimating the number of adults in the study population who have a particular characteristic, and a sample weight needed for most statistical packages to calculate standard errors.

### **Structure of the Remainder of this Report**

The remainder of this report is divided into three sections. The first section presents the hardcopy version of the questionnaire. The next section includes extensive crosstabulations of the responses to this survey. The final section displays answers to the open-ended questions asked in this survey.

## U.S.D.A. Forest Service Region 1 Social Survey

 **START HERE**

**Q1. Are you the adult age 18 or older in your household who will have the next birthday?**

Mark one  
button (X)

- Yes → Please continue.
- No → Please have the adult in your household who will have the next birthday complete the survey.

### **Purpose**

The purpose of this survey is to collect information that will help land managers improve conditions and resource management on federal public lands. Federal public lands include national forests, national parks, national wildlife refuges and Bureau of Land Management lands. These are different from city and state parks and playgrounds. Examples of federal public lands include the Bob Marshall Wilderness, the Dakota Prairie Grasslands, and the Upper Missouri River Breaks National Monument. This survey hopes to capture input from local stakeholders and therefore asks about **local** federal public lands.

### **Important Information**

When answering, please think of the federal public lands that are **nearby your home**. *These local federal public lands are those areas not more than an hour's drive away or within approximately 50 miles of your home.*
